Vielbein of the General Schwarzchild Metric 8/7/2025

The General Schwarzshild Metric:

$$ds^{2} = -e^{\nu(t,r)} dt^{2} + e^{\lambda(t,r)} dr^{2} + r^{2} d\theta^{2} + r^{2} \sin^{2}\theta d\phi^{2}$$
(1)

Note the trace of the Minkowski metric is (-,+,+,+). This gives the following Metric Tensor and its inverse:

$$g_{\mu\nu} = \begin{pmatrix} -e^{\nu(t,r)} & 0 & 0 & 0\\ 0 & e^{\lambda(t,r)} & 0 & 0\\ 0 & 0 & r^2 & 0\\ 0 & 0 & 0 & r^2 \sin^2 \theta \end{pmatrix}$$
(2)

$$g^{\mu\nu} = \begin{pmatrix} -e^{-\nu(t,r)} & 0 & 0 & 0\\ 0 & e^{-\lambda(t,r)} & 0 & 0\\ 0 & 0 & \frac{1}{r^2} & 0\\ 0 & 0 & 0 & \frac{1}{r^2\sin^2\theta} \end{pmatrix}$$
(3)

Calculating the Vielbeins:

$$g_{\mu\nu} = \eta_{ab} e^a_{\mu} e^b_{\nu} \tag{4}$$

Since the metric is diagonal, the equation can be simplified by saying a = b. I will also constrain the Vielbein to being a diagonal matrix, which allows me to simplify further by saying $\mu = \nu$. This also gives a correspondence between local and Schwarzchild coordinates, where a = 0, 1, 2, 3 correspond to $\mu = t, r, \theta, \phi$ respectively in the Vielbein. Anything else is 0.

So I am left with:

$$g_{\mu\mu} = \eta_{aa}(e^a_\mu)^2 \tag{5}$$

Solving this explicitly:

$$g_{tt} = (-1)(e_t^0)^2 = -e^{\nu(t,r)} \qquad e_t^0 = e^{\frac{\nu(t,r)}{2}}$$

$$g_{rr} = (e_r^1)^2 = e^{\lambda(t,r)} \qquad e_r^1 = e^{\frac{\lambda(t,r)}{2}}$$

$$g_{\theta\theta} = (e_{\theta}^2)^2 = r^2 \qquad e_{\theta}^2 = r$$

$$g_{\phi\phi} = (e_{\phi}^3)^2 = r^2 \sin^2 \theta \qquad e_{\phi}^3 = r \sin \theta$$

Therefore, the Vielbeins:

$$e_{\mu}^{a} = \begin{pmatrix} e^{\frac{\nu(t,r)}{2}} & 0 & 0 & 0\\ 0 & e^{\frac{\lambda(t,r)}{2}} & 0 & 0\\ 0 & 0 & r & 0\\ 0 & 0 & 0 & r\sin\theta \end{pmatrix}$$

$$e_a^{\mu} = g^{\mu\nu} \eta_{ab} e_{\nu}^b = \begin{pmatrix} e^{\frac{-\nu(t,r)}{2}} & 0 & 0 & 0\\ 0 & e^{\frac{-\lambda(t,r)}{2}} & 0 & 0\\ 0 & 0 & \frac{1}{r} & 0\\ 0 & 0 & 0 & \frac{1}{r\sin\theta} \end{pmatrix}$$

$$e^{a\mu} = g^{\mu\nu}e^a_{\nu} = \begin{pmatrix} -e^{\frac{-\nu(t,r)}{2}} & 0 & 0 & 0\\ 0 & e^{\frac{-\lambda(t,r)}{2}} & 0 & 0\\ 0 & 0 & \frac{1}{r} & 0\\ 0 & 0 & 0 & \frac{1}{r\sin\theta} \end{pmatrix}$$
